FILDANgreen accessories

Film Production Waste

The **econamid®** material from **DOMO Engineering Plastics** is an engineering plastic based on valuable recycled polymers.

This sustainable granulate, from which our plastic accessories are made of, is based on high-quality post- industrial fiber residues that come from reliable sources.

This guarantees environmental friendliness and durability to the highest industrial standard.

Fildan Re-Used Production Material

Waste is generated, wherever there is production - including us.

But with us the material is reused for producing new articles which are made out of 100% fildan production material. The material consists out of trunks, fashion colors returned and old stock collected from customers.

Pre-Consumer Waste

This pre-consumer material consists of industrial waste of the detergent packing production of the company **Henkel**.

We use the material to produce new articles which are made out of 100% industrial waste.

Biodegradable Material

Amni Soul Eco® material from **Rhodia-Solvay Group** is an engineering plastic which is biodegradable as it can quickly decompose after being properly disposed of in landfills.

The durability and the quality of the produced accessories is guaranteed as the decomposition process only starts once the garment is discarded and reaches the landfill having contact with existing microorganisms.

Unlike other materials that take decades to be decomposed. Amni Soul Eco® takes approximately three years to be eliminated from the planet.

Material BD8

black, white and dye to match possible

Amni Soul Eco® biodegradability as determined by the standard test method ASTM D5511
